

Option to block Watches notification from CM Server already at the Watch's setup in C-MonitorConsole

### **Basic watch setup in C-MonitorConsole**

Add a Watch directly on the computer through the section C-MonitorConsole.

C-Monitor console is opened by right-clicking on the C-Monitor icon in system try menu.

	🕼 Odoslať a prijať

## Add a watch through "Create Watch with wizard"

Adding the watch through the wizard will simplify the watch's creation.

Choose an aptly name for the Watch in the first window of the wizard. This name will be automatically put into notification messages, i.e. it should be short, in nominative and if you desire, it may contain name of the monitored object (not recommended, in case you want to distribute the Watch in bulk).

Published on Customer Monitor (https://customermonitor.co)

G Watch Wizard	
Create watch with wizard	
Name of watch SPDOLSV na SERVER1-PRN 1	
<b>Tip</b> Choose meaningful, descriptive name of watch, because this name will be used for suggesting notification messages texts.	
Proper watch name is e.g. "Free disk space on SERVER1"	
< Back Next > 2	Cancel

Image: Obrázok: Add watch with wizard

In the second window of the wizard, choose condition (comparison with a concrete parameter) for the Watch. There's a vast amount of condition, <u>read more about the conditions here.</u> [1]

To illustrate the setup, we'll use a watch for monitoring of process usage, which manages printing (spoolsv.exe)

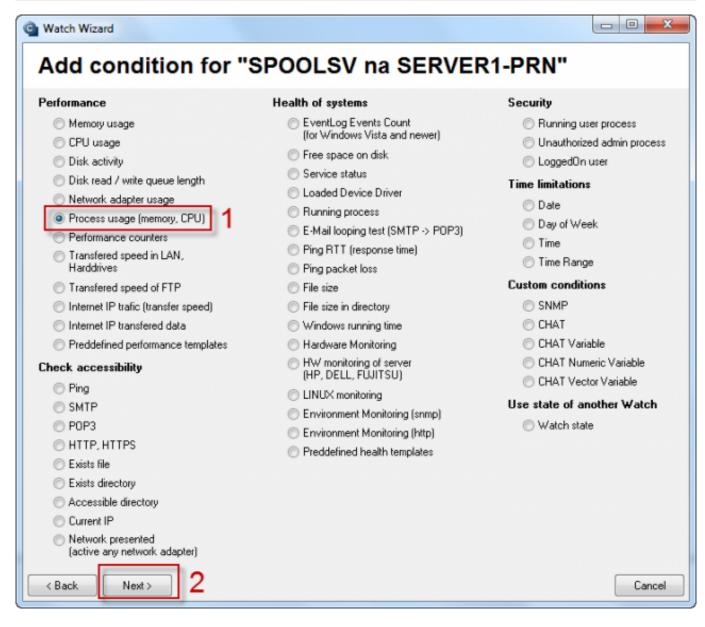

Image: Obrázok: Výber podmienky

OMER MONITOR

The following setup of the watch's condition is individual according to the situation, for which the Watch is created.

In step 1, choose a process that you want to monitor.

In step 2, choose whether you want to monitor the usage of CPU, or of the memory. Select a suitable operator and value.

In step 3, set a minimal change of the monitored parameter, at which the current value is sent to the CM Server, and recorded to CM Server database.

In step 4 you may set option for the Watch to be switched to "Unknown" state. This setting is used to suppress notification, if the watch would be irrelevant, or confusing at certain state of the condition. This checkbox is defaultly inactive.

Published on Customer Monitor (https://customermonitor.co)

Watch Wizard	
Process usage (memory, CPU)	
Exe Name (full path, name optional) spoolsv.exe	
Parameter Operator Value CPU Usage [%] • < • 90 2	1
Value from this condition send to CM server       3         If value changes more than       5       3         Never       8         If result of this condition       is False < 4         status of watch will be Unknown       4	
< Back Next > 5	Cancel

Image: Obrázok: Nastavenie podmienky watchu

You can add another Condition for the Watch in the Wizard through "Add Condition", edit the current Condition through "Edit Condition", or delete it by "Delete Condition".

Subsequently, it's **necessary to determine at what states of Conditions will the Watch be "OK".** Defaulty, it's in OK state if all Conditions are TRUE, i.e. in our example case, when Process Usage of the process spoolsv.exe is lower than 70%. If you need another combination of TRUE/FALSE conditions in your case, choose a convenient option from the Selectbox:

#### Watch state:

- OK if all conditions are true, FAIL if atleast one condition is false
- OK if at least one condition is true, Fail if all conditions are false
- OK if at least one condition is false, Fail if all conditions are true
- OK if all conditions are false. Fail if at least one condition is true

A Watch swiches state after change of the conditions' verity at the closest tick of C-Monitor (default it's every 30sec). In some cases it might be undesired, if a parameter changes its value for such a short time, it wouldn't influence operation of the IT system. In such cases, it's convenient to **activate Delay of the Watch's switch to "FAIL" state through the option "Delay for FAIL state".**  The option "Advanced options" enables setup of the watch's notification through actions in case of Unknown state, and options of the watch's evaluation in a longer time period than the default period in C-Monitor. Read more at Optimization of notification [2]

G Watch Wizard						
Conditions for "Testovací watch"						
1 Used Physical Memory Size < 90% Check on each watch state evaluation If Result of this condition is FALSE, Watch State will be Unknown Value will be sent to CM Server only if change to last sent value is more than 10						
Add Condition Edit Condition Delete Condition						
State of watch is DK if all conditions are true   FAIL - if at least one condition is false						
☑ Delay for FAIL state. Conditions for FAIL state must be met at least 1 🚔 Min 💌						
Hide Advanced Options						
If state of the watch is UNKNDW/N, notify this by options in actions						
Evaluate watch state with longer period than 30s (specified by C-Monitor license)						
Note: Watches are active from 5 min after the operating system start						
< Back Next > Skip Actions >>	Cancel					

Image: Obrázok: Nastavenie vlastností Watchu

Finish creation of the Watch immediately by pressing "Skip Actions", if you don't desire any advanced notification or execution of certain action after change of the Watch's state. <u>For setup of Actions, read here.</u> [3]

## Add a watch without the wizard

Creation of a Watch without the wizard is very similar and after a little experience with the wizard also faster, if you already know what Condition do you want to use, and you already learned where to find the particular settings for evaluation and notification of the Watch.

The same principles apply for setup of the Watch as for adding the Watch through the Wizard, read above in the section <u>Create Watch with wizard</u>.

# **Option to block Watches notification from CM Server already at the Watch's setup in C-MonitorConsole**

Since C-Monitor version 2.6, there's a tab Advanced in the Watch settings, where you have an option to disable notification, or notification and evaluation of the Watch on CM server.

By the option Block notification to CM server - you disable sending of emails, SMS at change of the watch's state, as well as creation of an error from the watch's error state. The Watch will continue to be evaluated, and all the values will be recorded and also displayed in reports.

By the option Block evaluation and notificaion - you disable sending of emails, SMS at change of the watch's state, in errors and in reports will the Watch be marked as blocked, and unless you select the option show blocked too, it won't be displayed. The watch's values are recorded and you may view their history.
