Availability and load of SQL servers

Published on Customer Monitor (https://customermonitor.co)

A few tips on how to monitor status and performance of SQL services:

Microsoft SQL availability by

standard tools such as OS services, by verification of database access [1]

Microsoft SQL performance by

general performance parameters bound to OS, such as usage of processor, drive, RAM [2] specialized performance parameters for SQL - performance countre [3] measuring time of operations over the used database [4]
