C-Monitor 3.0.742.4

08/02/2019

- Fixed *Easyclick* opening - secure selection of the correct default browser.

- Possibility of switching from http to https.

- With websocket, you can extend http / https communication intervals from C-Monitor to CM server to reduce the burden of CM Server.

- New watch condition for comp time deviation.

- New watch condition for bitlocker (Disk Bitlocker status) - monitors whether the bitlocker partition is available to the user.

- New watch conditions for accessing files and directories with given permissions - can be *run as* (user must exist on given pc or domain) or *remote* (user must exist on target device):

    - Exists File (as user)

    - File Size (as user)

    - Files Size in Directory (as user)

    - Files Count in Directory (as user)

    - Exists Directory (as user)

    - Directory Accessible (as user)

- Scheduled Tasks in Scheduler - advanced options for sending email based on the task status (according he exit code) – run, failed, or always send (default / previous setup). The Watches Wizard dialog has been adapted accordingly.
- Descript 3.0.395.0 currently collects information:
    - SSD detection

    - Bitlocker - which partitions are protected

    - Kaspersky Antivirus Detection

    - Default browser (moved from computer configuration to user information)

    - Systeminfo

    - Used wifi networks.

- Backup 3.0.403.0 - Fixed ZIP volume size (in some cases it was smaller than set).

CUSTOMER MONITOR®
IT monitoring and management tool

C-Monitor 3.0.737.0

04/05/2018

New generation functionality

- New form of communication between C-Monitor client and CM server using online websocket communication protocol. It brings faster responses.
- CM Remote - remote screen connection.

Significant changes

- New graphical menu layout in C-MonitorConsole.
- New dialog for selecting Easyclick screenshot from multiple monitors, possibility to cut or transfer the image from clipboard.
- New vmwBackup for 6.x versions (standalone update package).
- Brand new SFTP server module (standalone update package).
- C-Monitor security enhancement - handling any exe file possible only under the administrator's account.
- Protection against unauthorized shutdown of C-Monitor - After "killing" the monitor.exe process in service mode, it will restart (needed a correct exit through the C-Monitor control menu or C-MonitorConsole)

Improvements

- Correction of not showing icon in tray on Win10.
- Full differentiation between Win10 and Win2016.
- Descript detecting new versions of ESET antivirus home (ver. 8,9,10).
- New Watch condition for monitoring Public IP (reads public IP of your internet connection).
- Template updates for Synology.
- Descript detecting the date of the last successful OS update to WIN10 (the way of identification has changed).
- Improved MS Office ClickToRun version detection.
- EventAnalyser - possibility to enter a specific interval of event loading (from - to).
- IPScanner - suppressed screen "flicker" during search.
- C-Image - works better with new disks and operating systems.
- Added switch to interactive services screen in WIN2016 / WIN10.
- Displaying *release* and *build* of Windows in OS zones (e.g. for WIN release1803, build 17134.1.amd64fre.rs4_release.180410-1804).
- New zone Certificates - retrieve certificate expiration dates from Certificates Store and OpenVPN.
- The C-Monitor and C-MonitorConsole dialogs take into account font magnification and icon smoothing.
- Two-level security for communication with variable keys for the new CM mobile app.
- Fixed loss of some messages while the CM server is temporarily unavailable.
- Fixed NB / PC detection when registering C-Monitor.

C-Monitor 2.9 and older versions
